

Time & Cost Comparison

The © PRESTON RENTALS Superdeck® Retractable Loading Platform System is ideally positioned vertically, one above the other, for fast delivery of building materials by a crane.

Compatibility

The Superdeck® does not interfere with the external completion or finish of the building because the system is usually installed vertically. Like a chest of drawers, one is placed above the other, providing minimal disruption to the installation of the building facade. This allows closure and weatherproofing for the finishing trades.

Adaptability

The Superdeck's® unique adaptability has been paramount in its success. It will suit almost any 'typical' situation, while also being able to be used on a wide variety of complex or difficult installations.

Simplicity

The platform system is simple to understand and can be installed or relocated within 15 minutes.

The crane is one of the most important and expensive pieces of rental equipment on a construction site. The Superdeck® increases crane efficiency, **saving a minimum of approximately one (1) hour of crane time per day or *\$375 per day.**

Value & Safety Proposition

- Quicker installation & relocation
 - 15 minute installation vs. 1 hour for conventional platforms.
- Single pick point = reduced crane movement
- Safer loading and unloading of materials
- Maximize **JUST-IN-TIME** delivery methods:
 - Materials transferred directly from truck to Superdeck®.
 - Trucks spend less time at the construction site resulting in less congestion.
- Faster & easier waste removal from floors.
- Value Added:
 - The man-lift/hoist becomes available for the transportation of personnel and tools instead of being tied up for materials.
 - Waiting time for tradespeople is reduced to a minimum.

The Original Market Leader | History. Quality. Dedication.

Designed to simplify the handling of materials on your project, particularly on multi-story construction sites, this revolutionary and world-recognized innovation offers a "drawer-like" loading platform system, which has dramatically increased safety and reduced crane operation time for countless customers around the world. As a market leader, the Superdeck® is the first choice in providing safe, effective and efficient use on site.

Sizes & Capacity

The Superdeck® platforms vary in size: 7'2", 8'6", 10'6" and 13'9" wide. This allows a wide range of bulky materials to be moved safely.

The Superdeck® platform extends 15-feet beyond the slab edge of the building to ensure easy crane access. The platform can be extended or retracted by one person and is rated for universally distributed safe working load (SWL) of 11,000 lbs.

Productivity at its best!

Leveling ramps are made flush with the floor, giving easy access to pallet jacks and forklifts. The Superdeck® has a 5/16" floor plate that does not buckle under heavy loads. The Superdeck's® fully enclosed handrail system is a minimum of 42" tall to conform to OSHA standards.

The average 5-story building requires 3-4 units, while larger 50-story buildings may need between 15-20.

"Why risk safety to save a dollar when using the Superdeck® will deliver both SAFETY and SAVINGS?"
